DEMONSTRATION (Admin Side)

1. Landing Page

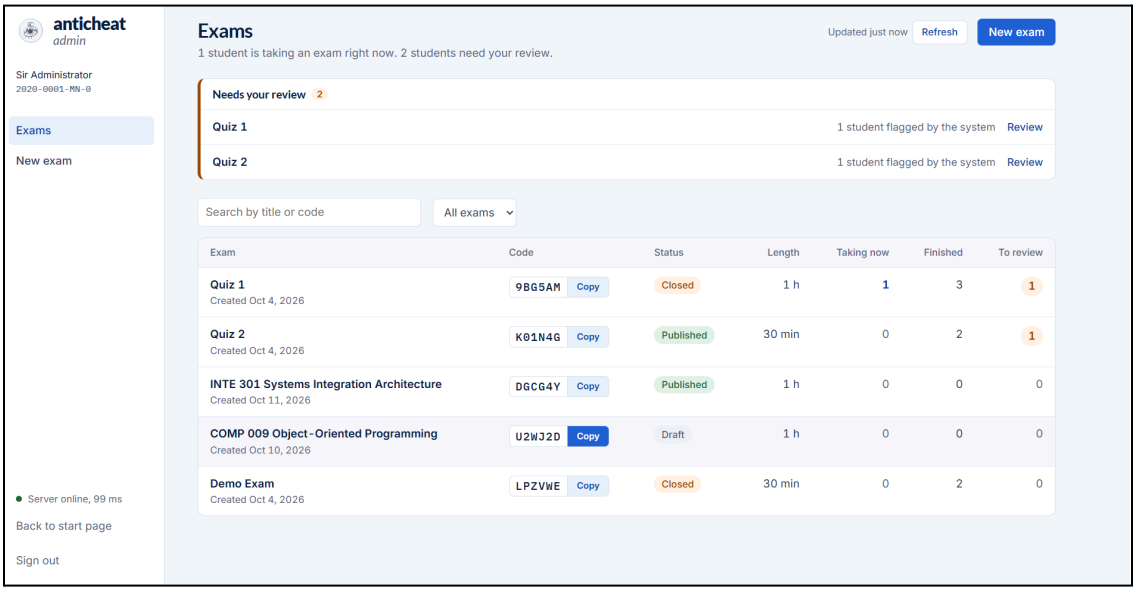

2. How AntiCheat works for the Admin side:

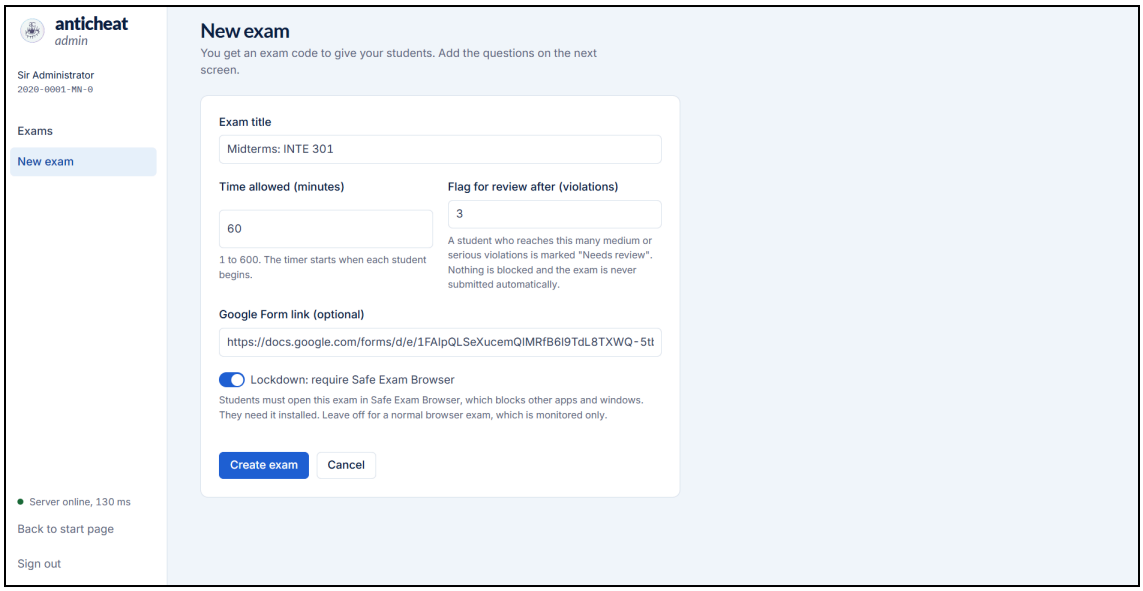

a. **Admin login**: log in as the Administrator (Teacher)

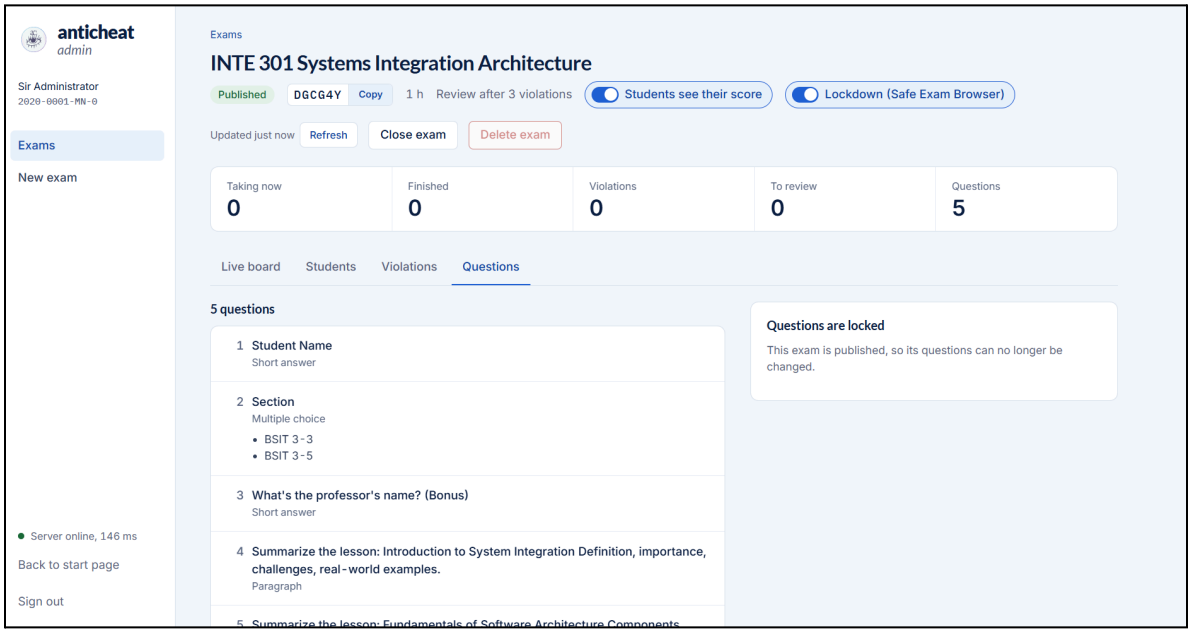

b. **Admin Dashboard** has information about the available exams/quizzes, creating a new exam, and an update on which needs the teacher's review.

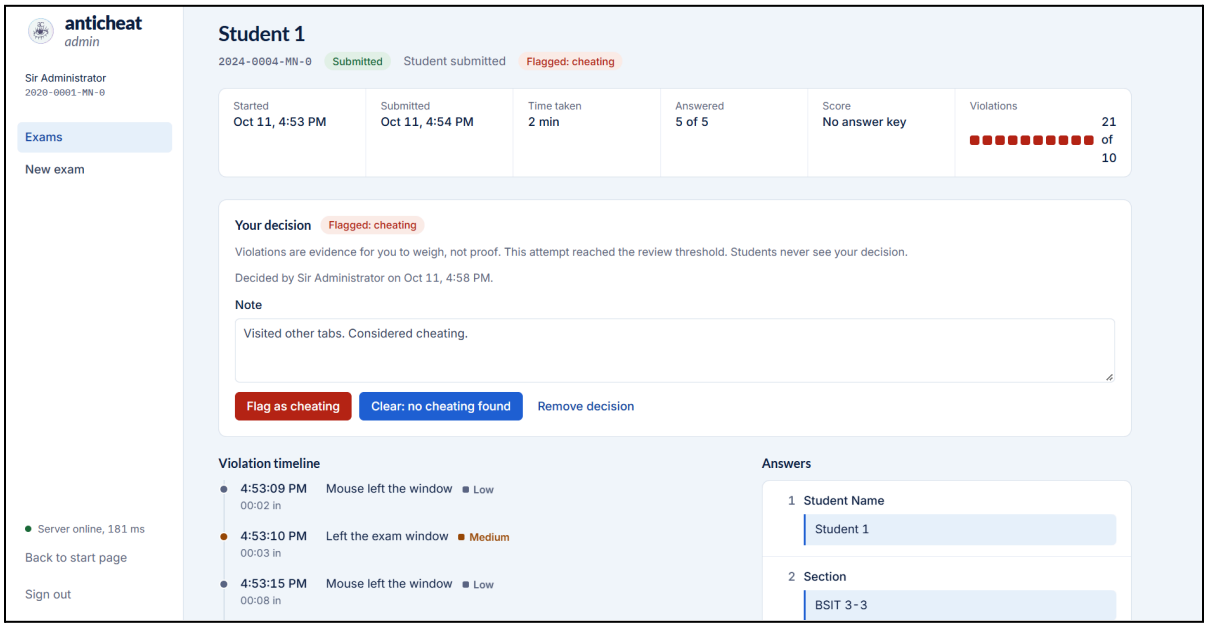

c. **New Exam Interface**: admin creates a quiz/exam manually, or can extract from an existing Google Form. This creates a code that students will enter in order to take the exam.

d. **Exam Details Interface** shows how the exams are currently tracking the student's activity within the website. Each action is logged as a risk (low, medium, high).

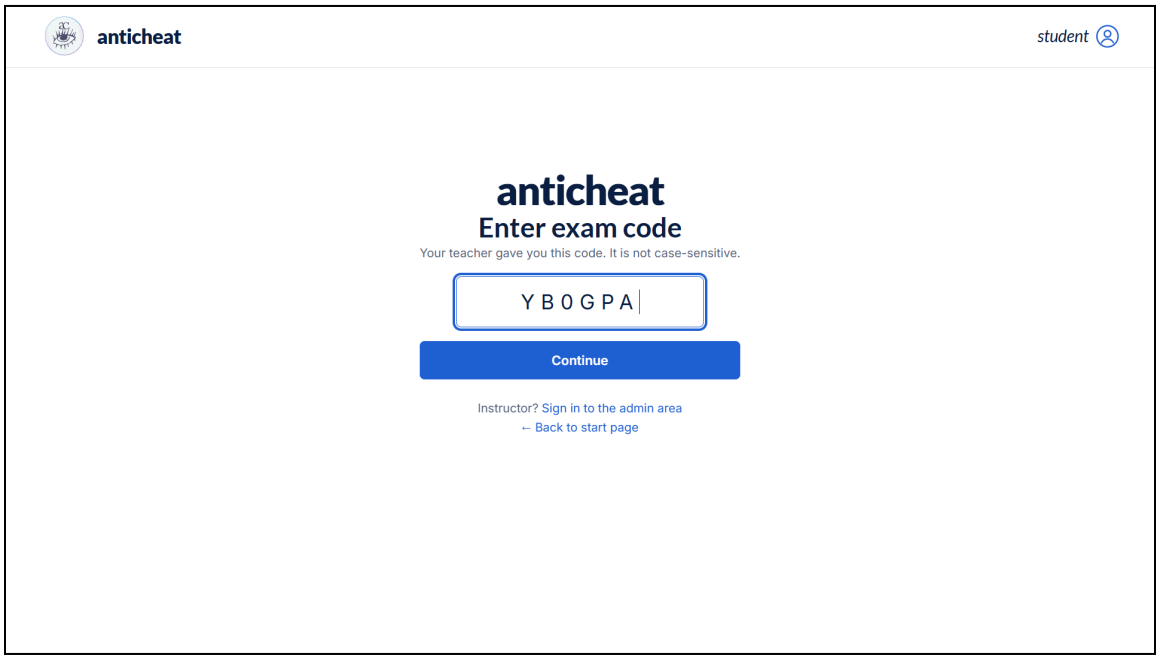

e. **Student Status Interface** shows how the teacher decides if the student who took the exam was cheating or not. Through the detailed activity logs, it shows the activity of the student taking the quiz.

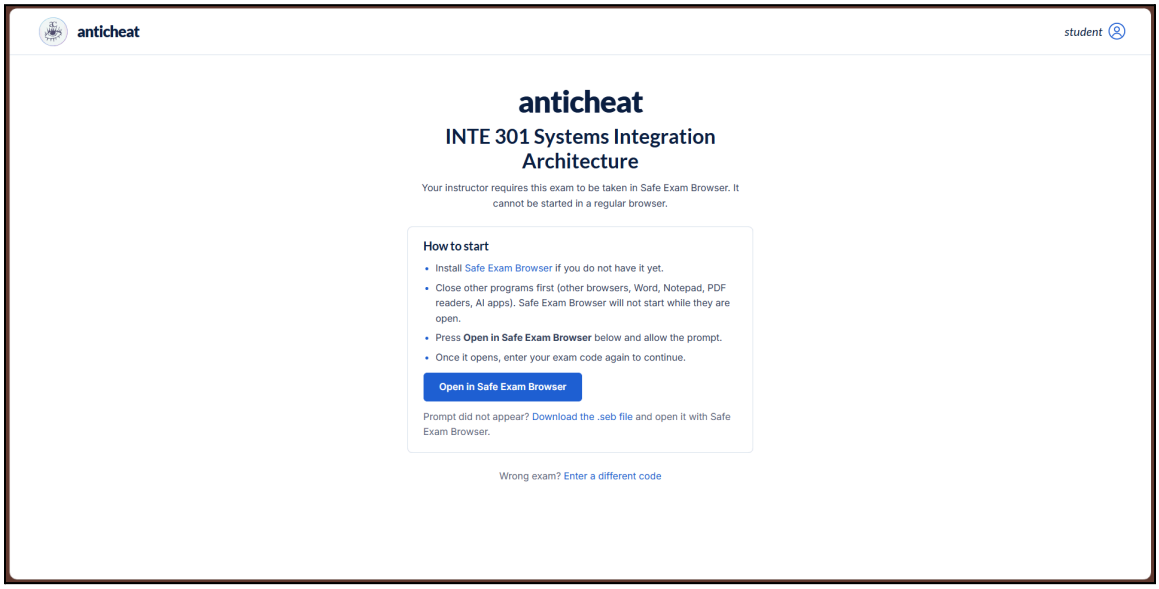

DEMONSTRATION (Student Side)

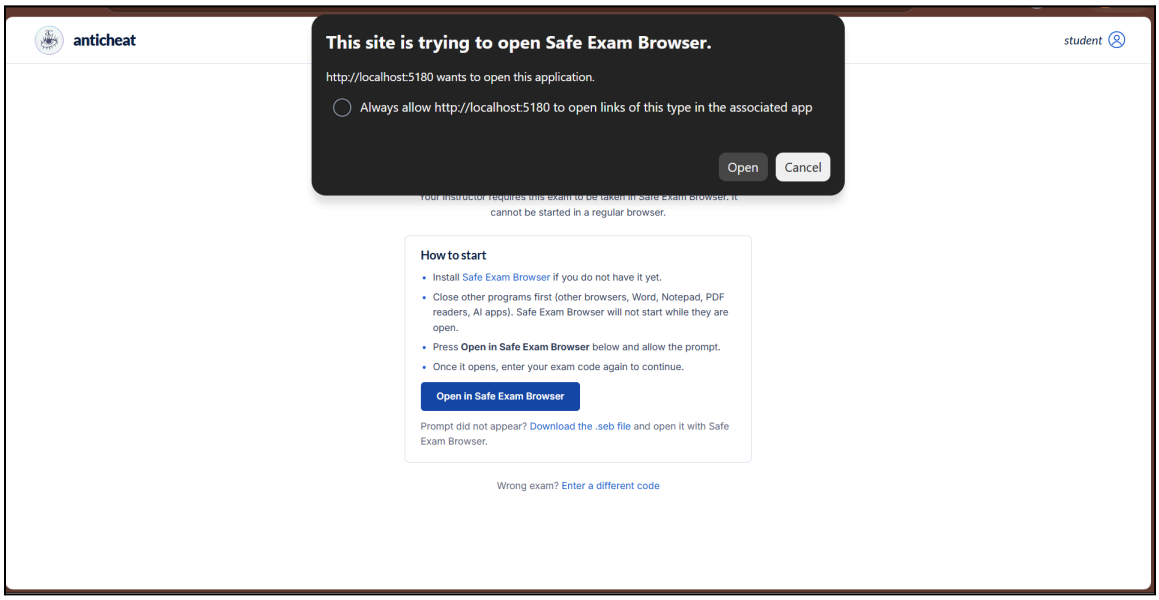

1. **How AntiCheat works for the Students:**
    a. **Landing Page for Students:** The students enter the code for the quiz given to them by their teachers.

    b. **Safe Exam Browser Requirement:** After entering the exam code using a regular browser, the system informs the student that the examination must be taken using Safe Exam Browser (SEB). Instructions are provided to install SEB if necessary, close other programs, and proceed by selecting **Open in Safe Exam Browser.**

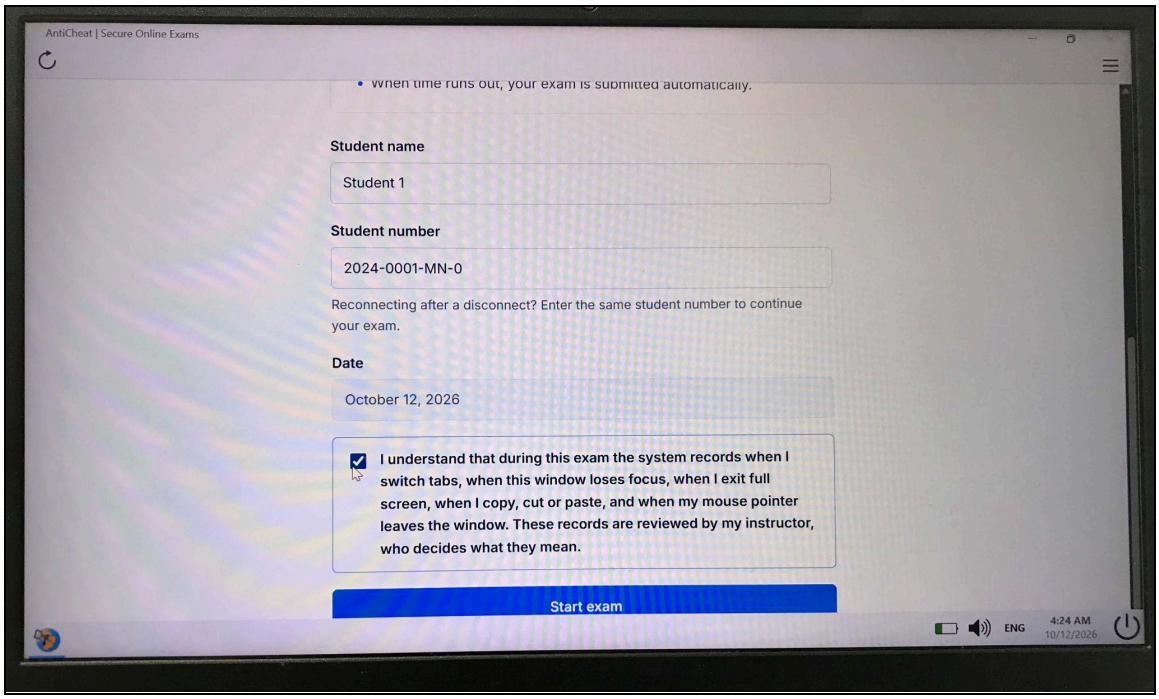

c. **Launching Safe Exam Browser:** The student allows the browser prompt to open Safe Exam Browser. Once launched, the student enters the configured secure examination environment.

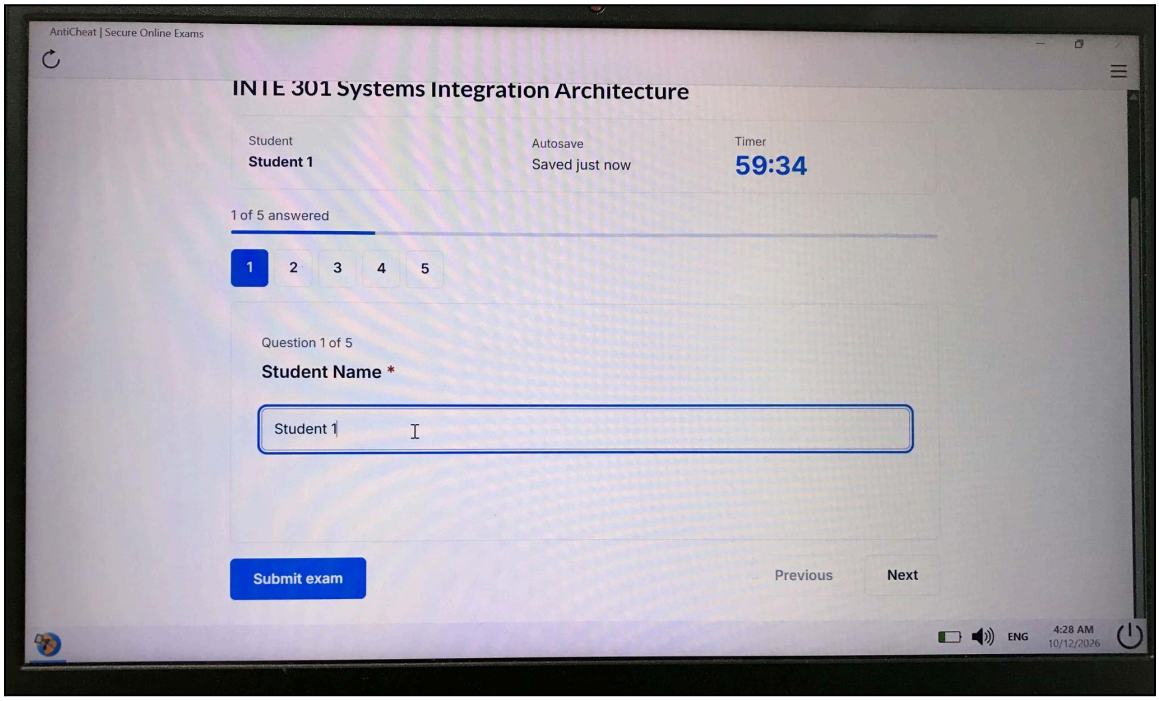

d. **Before You Start and Student Information Interface:** Before starting the examination, the student reviews the instructions, including the examination duration, monitoring information, and timer rules. The student then provides the required information, such as their name, student number, and examination date, and checks the consent checkbox before proceeding.

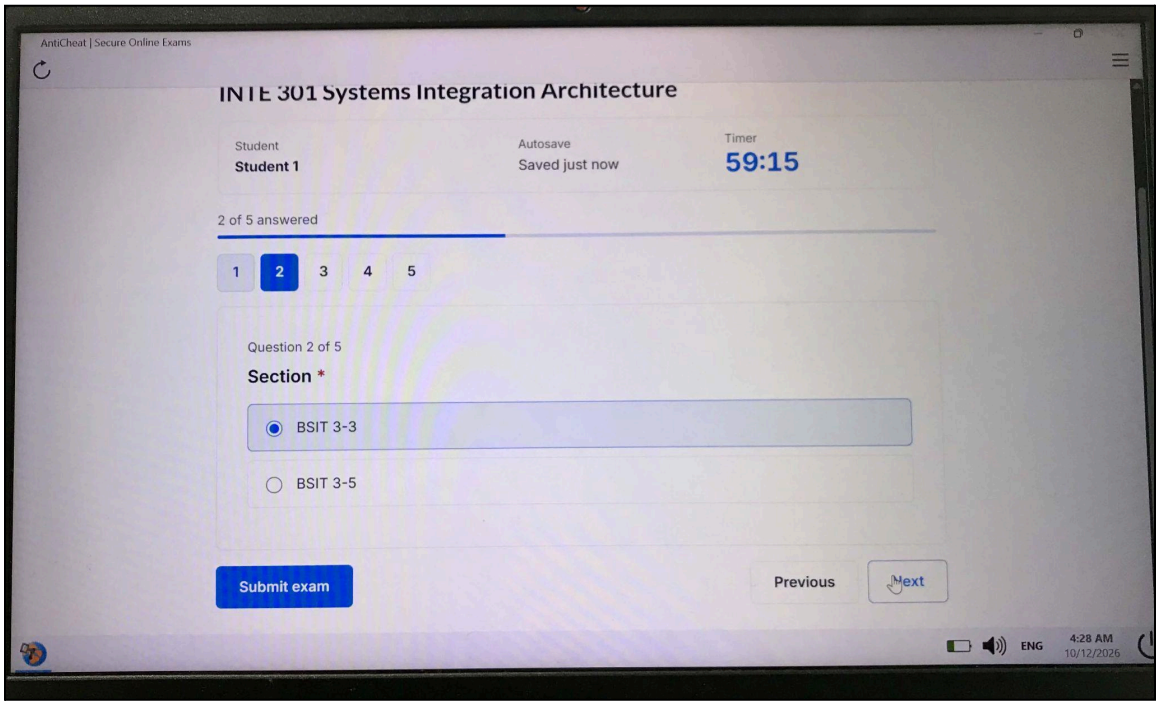

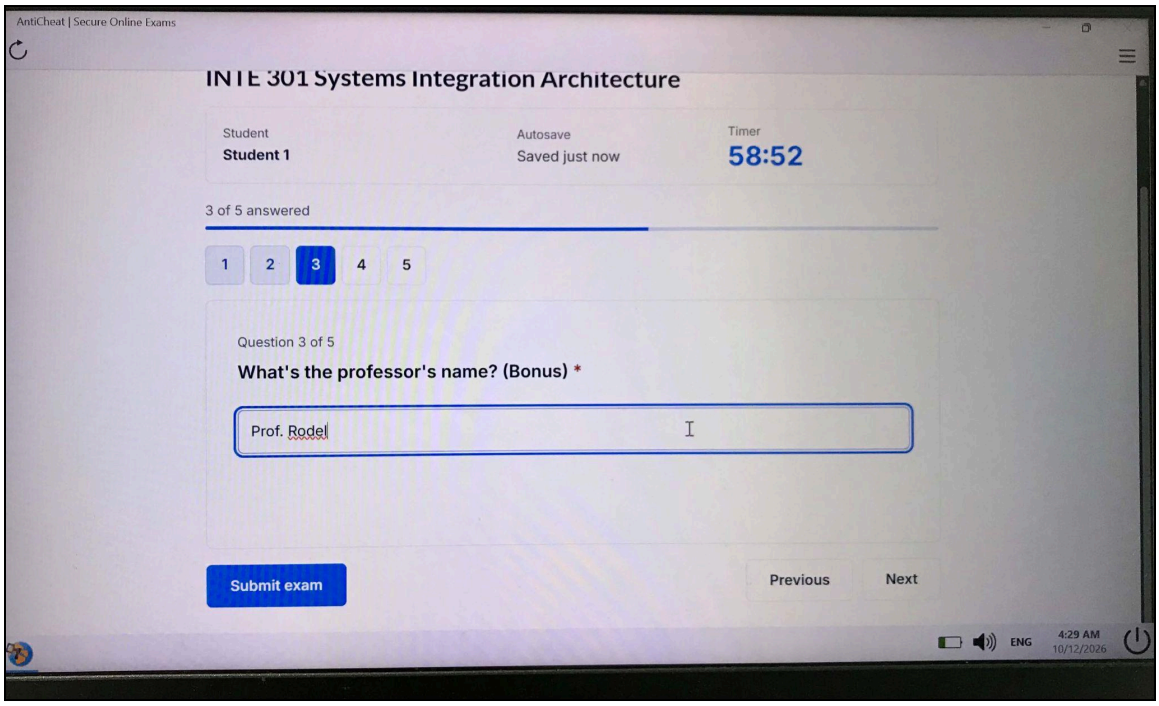

e. **Examination Interface:** After completing the required information, the student can begin answering the examination. The interface displays the questions, countdown timer, and answer-saving status. The system automatically saves answers when autosave is functioning correctly.

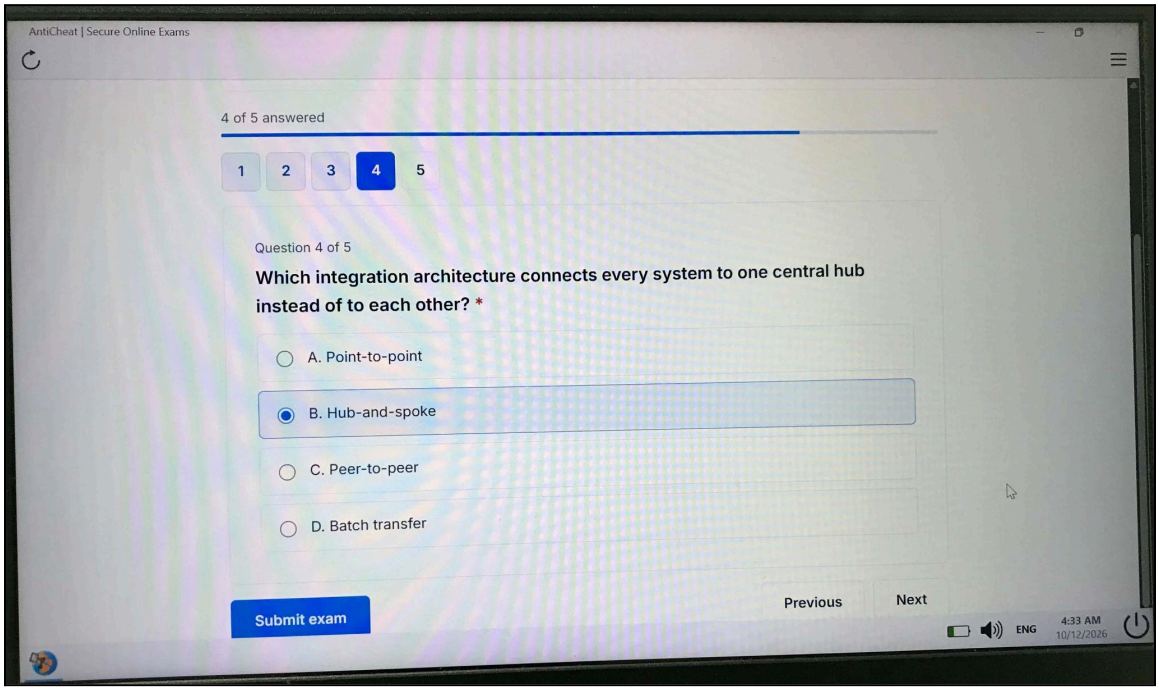

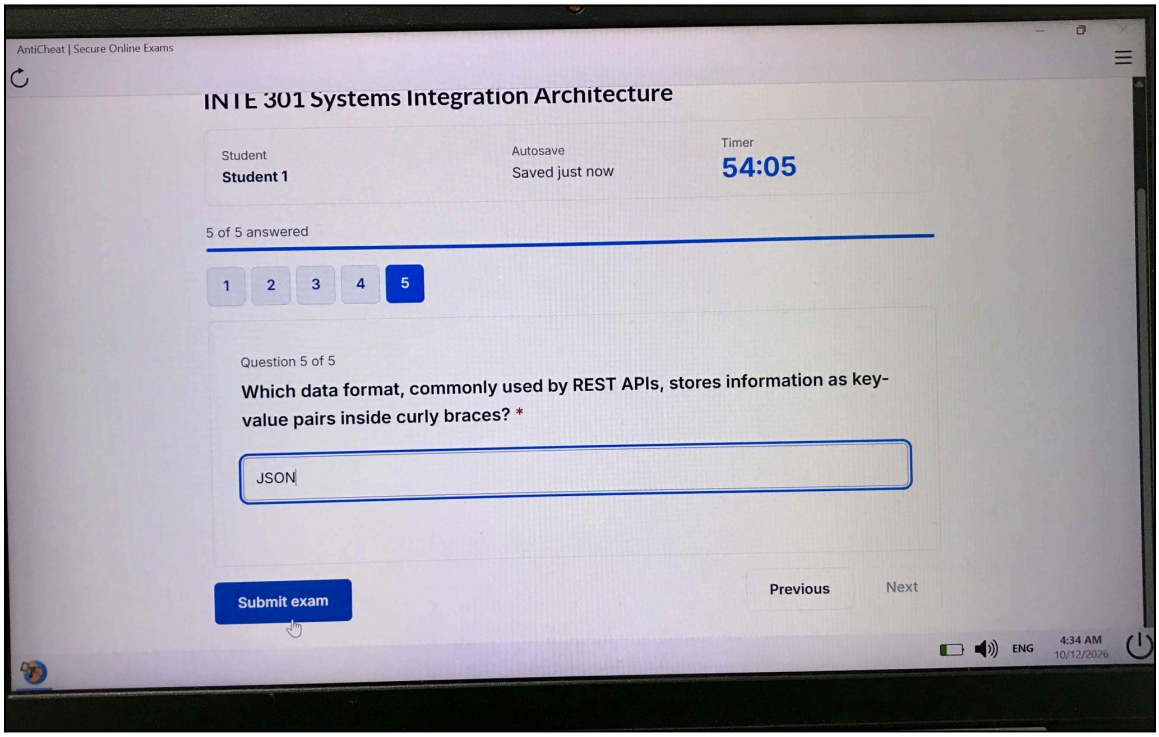

f. **Question Navigation and Progress Tracking:** The student navigates through the examination questions using the available controls. A progress indicator displays the number of questions answered, allowing the student to monitor their progress throughout the examination. The examination may include different question types, such as multiple-choice questions and questions requiring specific responses.

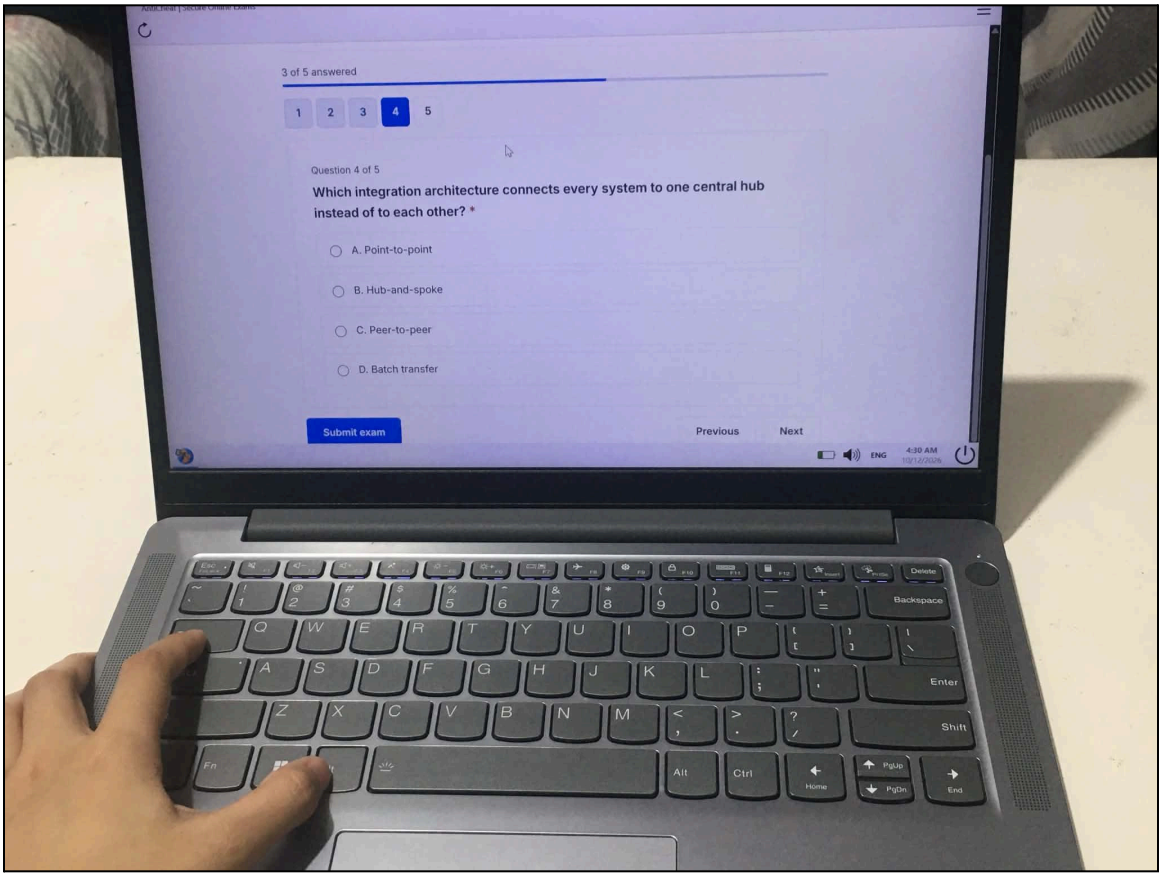

g. **Answering Examination Questions:** The student answers different types of questions, including multiple-choice questions and questions requiring specific responses. The student continues navigating through the examination until all required questions have been answered.

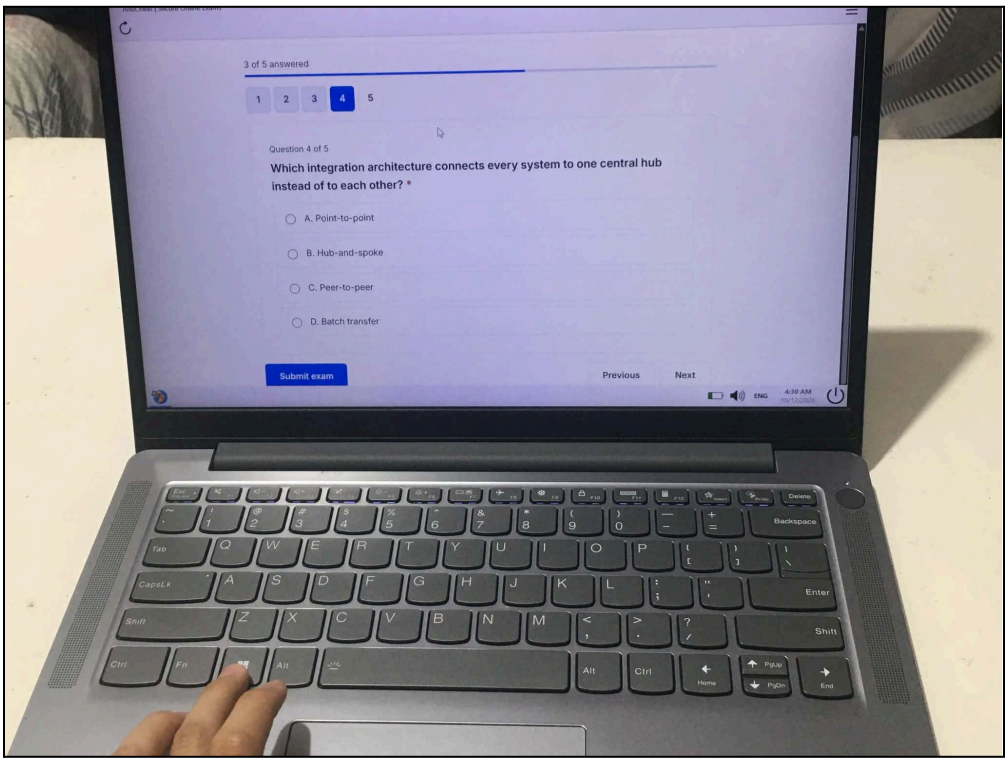

h. **Examination Lockdown and Keyboard Restrictions:** While taking the examination, Safe Exam Browser restricts supported keyboard shortcuts and browser functions according to its configuration. These restrictions are intended to prevent students from switching applications, opening additional browser windows, accessing developer tools, or using restricted clipboard functions during the examination.

   The lockdown functionality is demonstrated by testing **keyboard shortcuts** such as **Alt + Tab,**

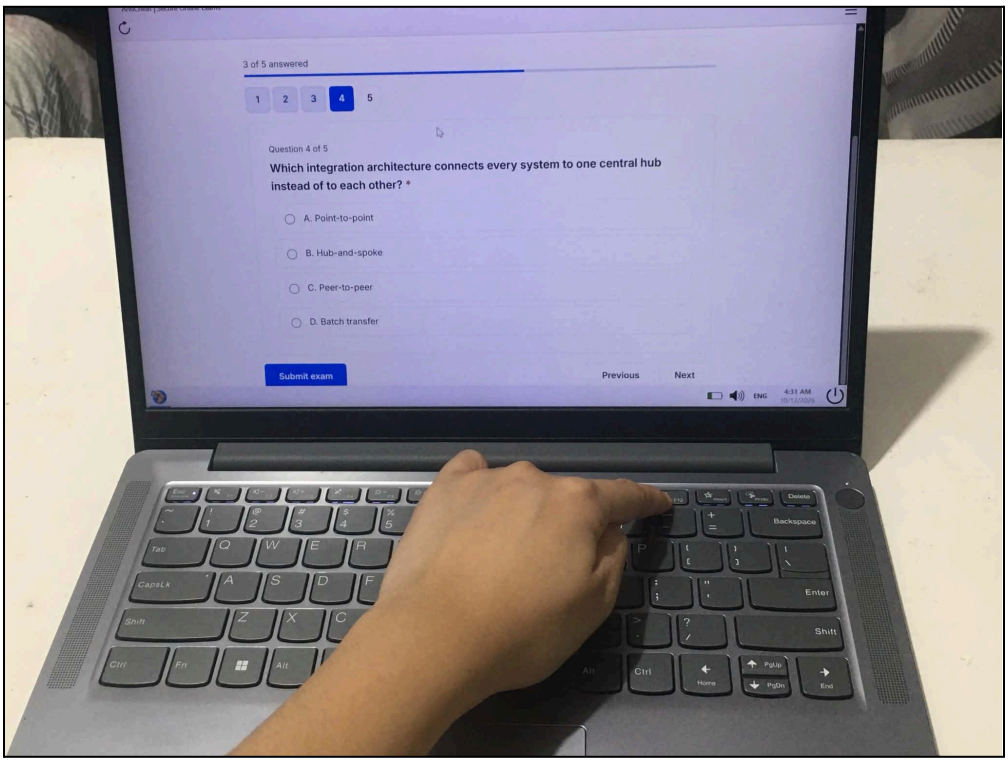

the Windows key,

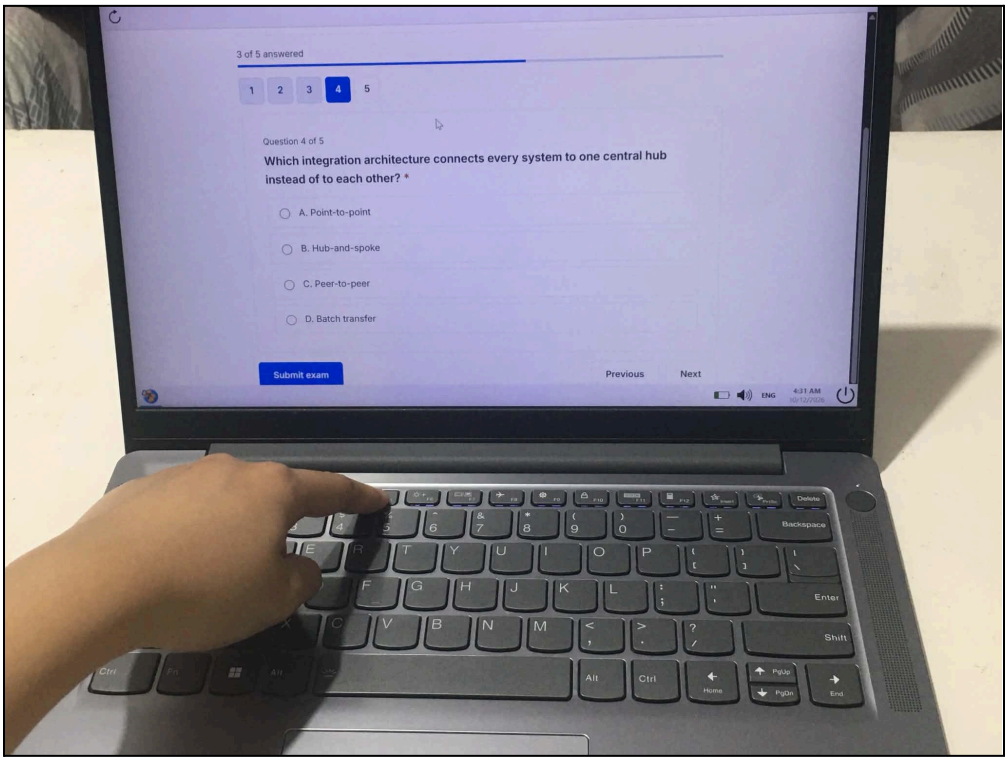

Alt + F4,

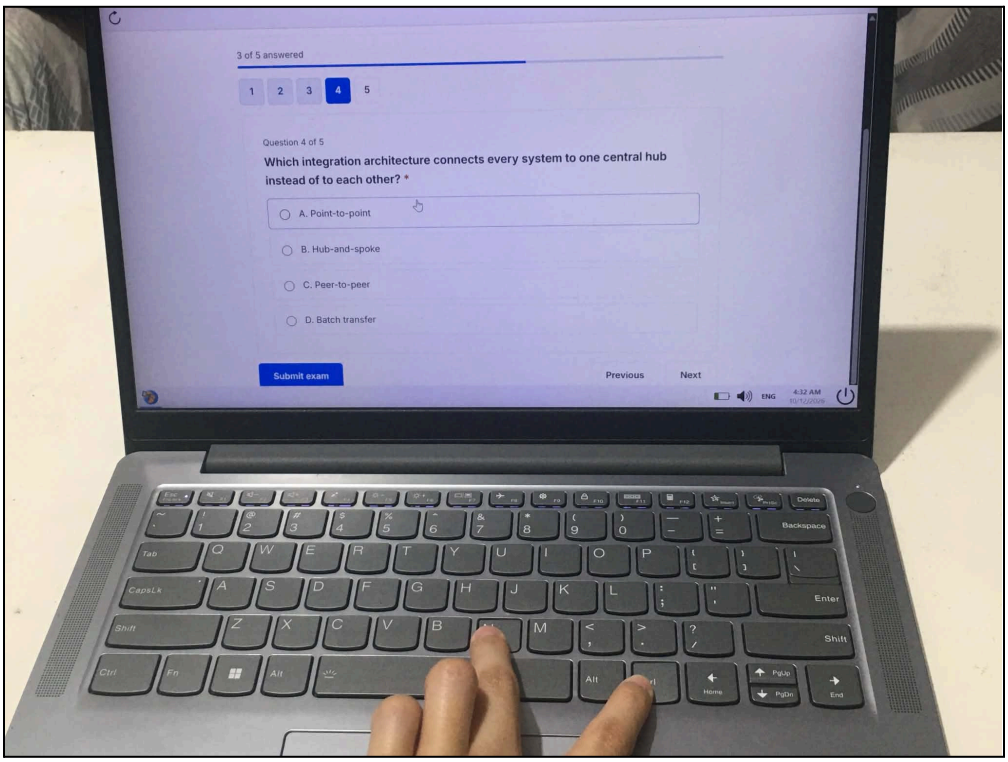

F12,

Ctrl + N,

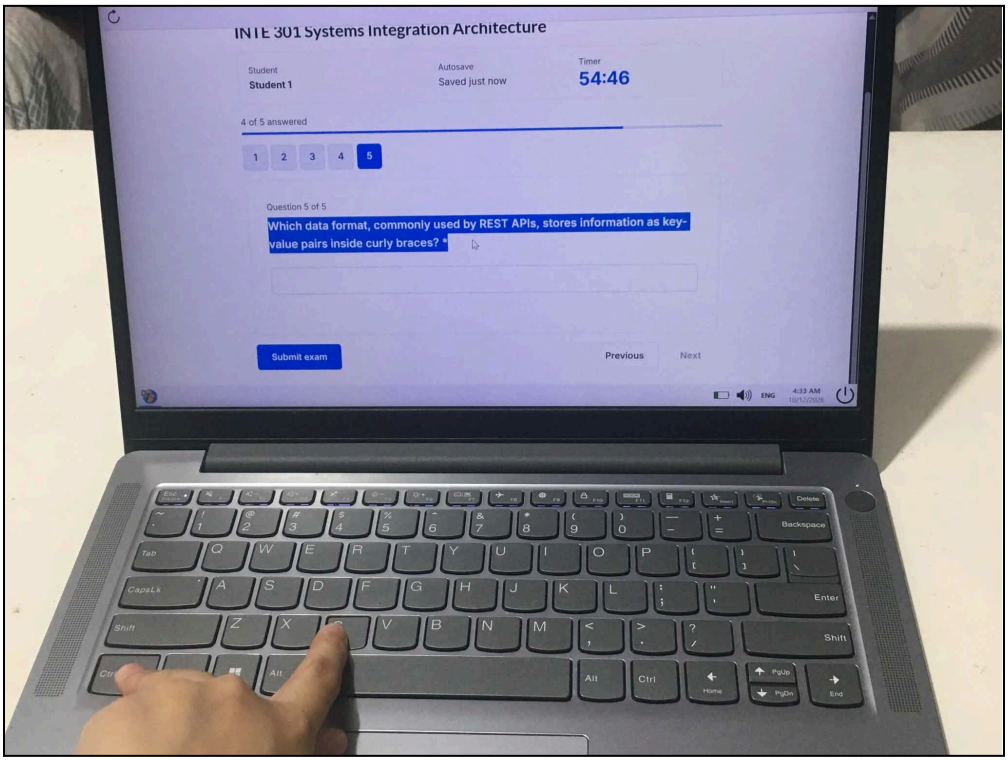

Ctrl + Esc,

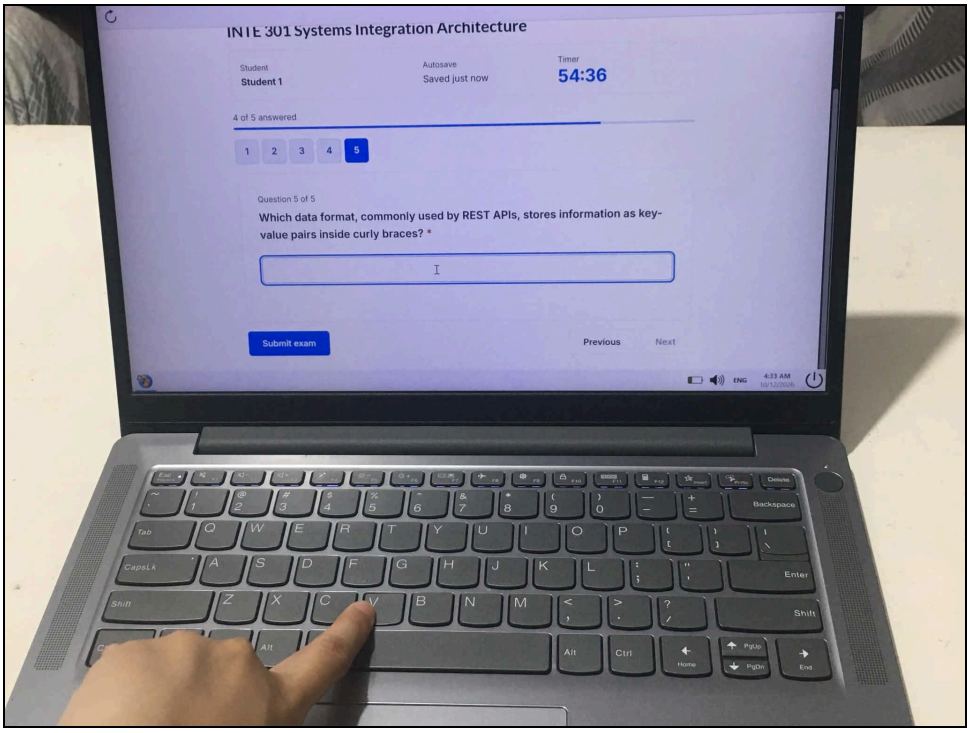

Ctrl + F,

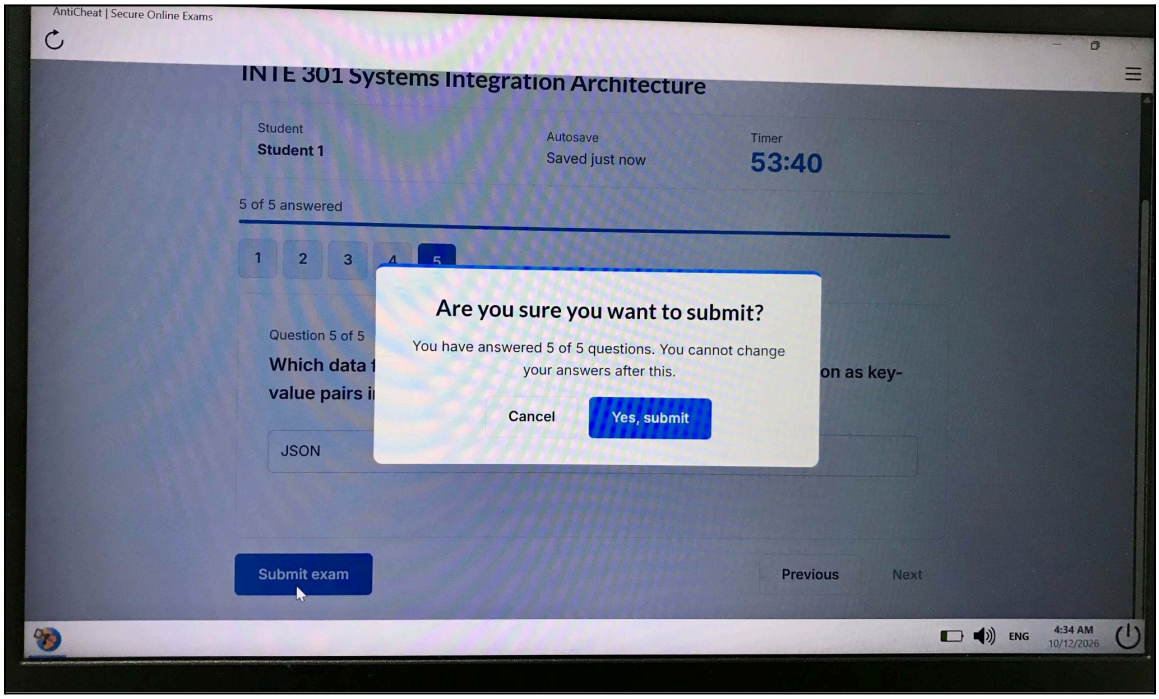

and Ctrl + C / Ctrl + V.

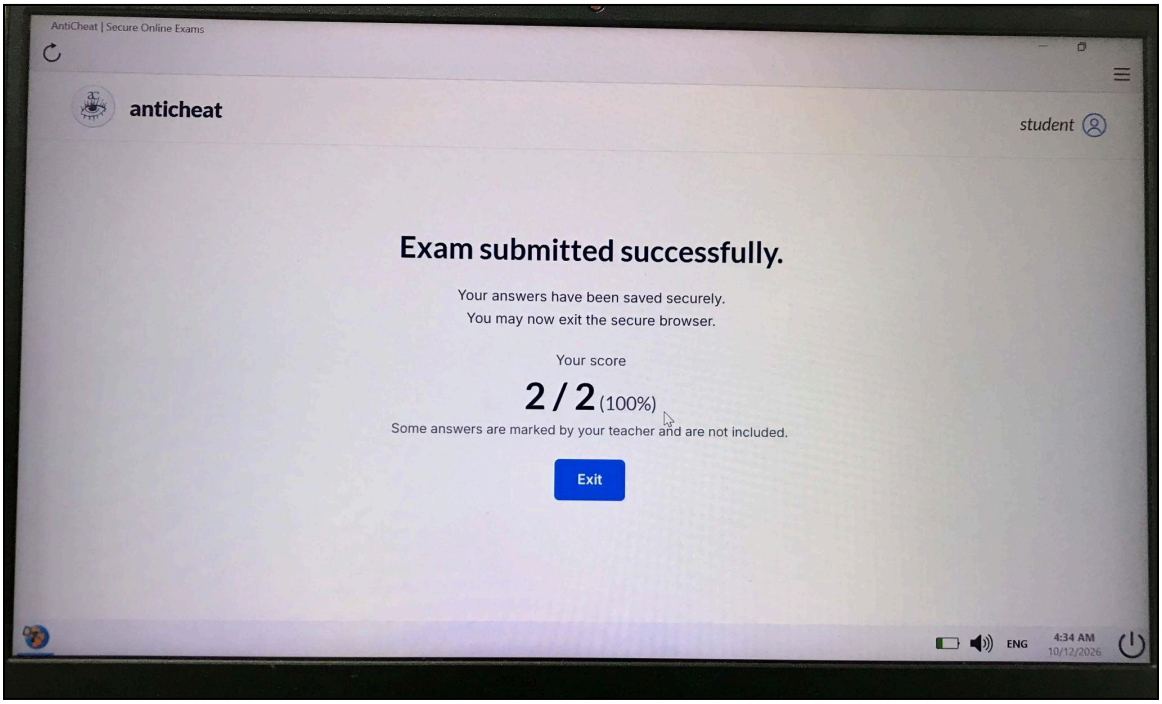

i. **Examination Submission Confirmation:** After answering the questions, the student selects Submit Exam. A confirmation dialog appears, allowing the student to review the number of answered questions before confirming the submission.

j. **Successful Examination Submission:** Once the examination has been submitted successfully, the system displays a confirmation message and the available examination result. Answers that require manual evaluation by the teacher may not be included in the displayed score. The student can then select Exit to leave the examination.

Through this process, AntiCheat provides students with a structured examination experience while using Safe Exam Browser to enforce the configured lockdown restrictions and support a more controlled testing environment.
